Turn Your Books Into Audiobooks — From \$25 Per Title

AI-narrated audiobooks for independent publishers. Fast. Affordable. Scalable. *Publisher-owned.*

Get a Free Sample Chapter · Convert One Book for \$25

Built for independent publishers, digital-first presses, and backlists that deserve audio — *without* studio costs:

- ✓ Works with existing print & ebook catalogues
- ✓ Single or dual-voice narration
- ✓ Local TTS → premium → cloned voices
- ✓ Audible, Spotify, YouTube, libraries, direct sales

Audiobooks Are Expensive — *Especially for Indies*

Professional studio microphone – traditional audiobook production is costly and time-consuming.

Traditional audiobook production:

- Costs **£2,000–£6,000+** per book
- Takes **weeks or months** to produce
- Requires studio scheduling & narrator availability
- Makes backlists financially *unviable* for audio

Result? Many publishers want audiobooks – but can only afford a handful.

Narrate-AI Changes the Economics of Audiobooks

A smartphone and earbuds on a stack of books – digital narration makes audio production quick and affordable.

Narrate-AI lets you generate full audiobooks using high-quality AI narration, starting at **\$25 per title**. Use it to:

- **Convert backlists** into audio
- **Test** new genres or authors in audio
- **Create** Spotify/YouTube audio editions
- **Decide** which titles justify full studio narration later

No long contracts. No platform lock-in. Just on-demand audio at a fraction of the cost.

How It Works

1. **Upload Your Book**
2. Upload EPUB, DOCX, or manuscript text (chapter-aware parsing)
3. **Choose Your Voice Setup**
4. Single narrator (e.g. for non-fiction or memoir) or dual voices for dialogue
5. Voice tiers: local TTS (budget), premium AI voices, or custom cloned voice
6. **Generate & Review**
7. AI narrates the book chapter by chapter
8. Review and **regenerate** any section as needed
9. Export final audio as industry-standard files (MP3/M4B)
10. **Publish Anywhere**
11. Distribute on Audible, Apple Books, Spotify, etc.
12. Supply libraries (OverDrive, BorrowBox)
13. Upload to YouTube or podcast feeds, or sell direct to listeners

Simple, Publisher-Friendly Pricing

Audiobooks from \$25 per full book (depending on voice tier & length).

Typical uses for the \$25 tier:

- Backlist conversions
- Pilot audio releases to test listener interest
- Series or genre experiments
- AI-narrated editions clearly labeled as such (if required)

Custom pricing is available for:

- Batch conversions of many titles
- Higher-end **premium voices**
- **Voice cloning** of an author or narrator
- Extra-long nonfiction works

Try One Book for \$25 – no commitments, just a flat fee to generate your first audiobook.

Why Publishers Choose Narrate-AI

- ✓ **You own the audio files** (no platform lock-in or exclusivity)
- ✓ Works alongside your **traditional audiobooks** – use AI for titles that can't justify studio costs

- ✓ Options for **clear AI narration labels** to meet any disclosure guidelines
- ✓ **Scales** from 1 book to 1,000+ with minimal effort
- ✓ Allows inexpensive testing before investing in human narration

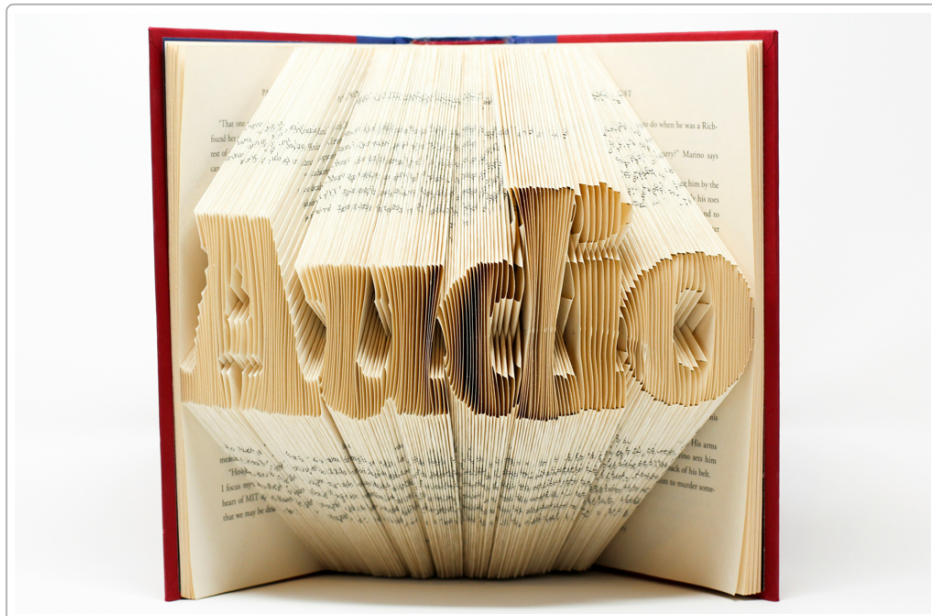

"This lets us do audio for books we'd never justify with a studio budget."

Narrate-AI Pitch Deck Outline 🎧

Slide 1 – Title

Cover slide image: an open book with pages forming the word "Audio," representing Narrate-AI's audiobook service.

Narrate-AI – Affordable Audiobooks for Independent Publishers

Slide 2 – The Problem

Audiobook production is traditionally tied to costly studio setups.

- **Audiobooks are expensive** – £2k–£6k per book in studio costs
- **Studios don't scale** – can't produce dozens of backlist titles quickly
- **Indie presses are priced out** – only top titles get audio
- **Huge backlists remain unheard** – many books never become audiobooks due to cost/time

Slide 3 – Market Shift

- 🎧 **Audio is the fastest-growing format** in publishing 1 2
- **Platforms like Spotify/YouTube** are embracing audiobooks
- **Libraries and listeners demand more audio** content
- **AI narration technology** is now viable for commercial use

Slide 4 – The Solution (Narrate-AI)

- **Generate full audiobooks from \$25** in hours, not months
- **Single or dual voice** options for narration
- **Multiple quality tiers** (from basic TTS to premium or cloned voice)
- No platform lock-in – *you own the audio files*

Slide 5 – How It Works (Workflow)

1. **Upload manuscript** (e.g. EPUB/DOCX)
2. **Select voices** (choose male/female, styles, or cloned voice)
3. **AI generates audio** for each chapter (review or redo as needed)
4. **Publish anywhere** (get standard audio files for distribution)

Slide 6 – Voice Quality Options

- **Local TTS** – budget-friendly, suitable for testing
- **Premium AI voices** – human-like quality, wide selection
- **Cloned voice** – custom voice cloned from an narrator or author (for brand/series consistency)

Publishers choose the tier per title to balance cost and quality.

Slide 7 – Use Cases

Independent publishers often have extensive backlists – now these books can reach audio listeners.

- **Backlist revival:** Turn long-tail catalog titles into audiobooks cheaply
- **Genre fiction & non-fiction:** Quickly produce audio for niche genres
- **Audio-first pilots:** Test new authors or series in audio before full investment
- **YouTube/Spotify editions:** Create audio content for free-to-consume channels
- **Market testing:** Gauge audiobook demand before paying for studio narration

Slide 8 – Pricing

- Starts at **\$25 per book** (full narration)
 - *No hidden fees*, no royalties to platform – flat generation cost
 - **Bulk discounts** for many titles at once
 - **No exclusivity** – use the audio files anywhere you want
- (Higher-tier voices or custom services available at adjusted pricing.)*

Slide 9 – Why Publishers Like It

- **Makes audio viable** for *more* books, not just bestsellers
- **Lowers financial risk** on uncertain titles (try audio with minimal spend)
- **Speeds up production** – get audiobooks in days
- **Complements human narrators** – focus expensive studio time on marquee titles, use AI for the rest

Slide 10 – Next Steps (Call to Action)

- **Free sample chapter** – send us a chapter, we'll return a narrated audio sample
- **\$25 pilot audiobook** – pick one book from your catalog for a full AI narration trial
- **Batch quotes** – interested in 10+ books? Let's talk bulk pricing and voice options

Let's discuss which of your titles might be a good fit to start with Narrate-AI. 📚

Publisher FAQ

Q: Is AI narration allowed on platforms like Audible or Spotify?

A: Yes. AI-narrated audiobooks are permitted as long as you follow each platform's guidelines (for

example, some require an “AI narration” disclosure) ³. Narrate-AI provides files that meet technical specs for Audible, Spotify, Apple Books, etc., and we help ensure any required labeling is in place.

Q: Do we *own* the audiobook files your system creates?

A: Absolutely — 100% yours. You receive the final audio files (MP3/M4B) to use however and wherever you want. There’s no lock-in; Narrate-AI is a tool, not a distribution platform, so you retain full ownership and control.

Q: How good is the audio quality really?

A: It’s surprisingly good, but it depends on the voice tier you choose. Our *premium AI voices* are highly natural (many listeners can’t tell the difference to human narration at first ¹), while the *budget voices* are simpler but useful for testing or niche titles. You can always start with a **free sample chapter** to judge the quality, or do a \$25 pilot on one book. Most publishers are impressed once they hear it for themselves.

Q: Is this meant to replace human narrators?

A: Not at all — think of it as a complement. Many publishers will continue using professional voice actors for flagship titles or where the performance aspect is crucial. Narrate-AI is used for: backlist titles that wouldn’t get an audio version otherwise, lower-margin genres, testing listener interest, and producing “AI edition” audiobooks alongside the human-narrated edition. It lets you **expand your audio lineup** without taking budget away from traditional productions.

Q: Can Narrate-AI handle fiction with dialogue, or books with multiple characters?

A: Yes. You can generate **dual-voice narration** for fiction – for example, a male voice for narration and a female voice for all female dialogue (or vice versa). It’s not full cast acting, but it does distinguish characters. For complex novels, some publishers use AI to create a basic audio edition, then decide later if sales warrant a human-voiced dramatization.

Q: What input formats does the system accept?

A: We support **EPUB, DOCX, or plain text** manuscripts. The uploader will automatically detect chapters from formatted ebooks. Clean, edited text input is important for best results (just like with any audiobook, the text is the script).

Q: How long does it take to generate an audiobook?

A: It’s usually *hours*, not weeks. For example, a 300-page novel might take a couple of hours to generate and another hour or two for you to review spot-checks. Even with revisions, you’re looking at same-day or next-day delivery of full audiobook files in most cases. This enables rapid testing and quick turnaround for new releases.

Q: Can we convert a large batch of titles in one go?

A: Yes, batch conversion is one of our main features for publishers. You could upload, say, 50 backlist ebooks, choose voices for each, and generate all of them in parallel. We’d likely work out a **batch pricing** plan and help manage the process, but it’s entirely doable – that’s the power of AI scaling versus one-at-a-time studio recordings.

Q: Can we use a custom voice – for example, an author’s voice cloned for their books?

A: We do offer **voice cloning** as an option. This requires the individual’s permission and a high-quality sample of their voice to train the AI. If an author or narrator is interested in creating an AI model of their voice (and agrees to rights), Narrate-AI can use that for their books so the narration matches their

real voice. It's an advanced feature and involves additional cost and setup, but it's possible. Many publishers start with the built-in voices, and consider cloning after proving the concept.

Next Steps: It sounds like you're ready to dive in! I can help you customize the landing page on your site (or a new **Narrate-AI for Publishers** page), design the 1-page PDF pitch, and even draft a targeted list of indie publishers to reach out to first. Just let me know which part you'd like to tackle next, and we'll make it happen.
